Amendments to the Claims:

This listing of claims will replace all prior versions, and listing, of claims in the application:

Listing of Claims:

Please cancel Claims 11-16 and add claims 17-22, as follows:

17. (New) A plug-in connection for connecting pipes or hoses, comprising
a nozzle having at least one detent shoulder, and
a plug adapted to interfit with the nozzle and including an inner sleeve and an outer sleeve, said
inner sleeve being spaced apart from and substantially parallel to the outer sleeve, wherein the
plug further includes at least one opening extending through the inner and outer sleeves, and
a detent spring having legs adapted to protrude inwardly through the at least one opening and
latch behind the at least one detent shoulder of the nozzle,
wherein the inner sleeve and the outer sleeve are joined at an end of the plug facing the nozzle by
a material connection, thereby enabling the inner and outer sleeves to withstand a high static and
dynamic pulling force.
18. (New) The plug-in connection of claim 17, wherein the inner sleeve and the outer sleeve
form a double wall at least in a region proximate to the at least one opening, said double wall in
the proximate region being formed by squeezing together the inner sleeve and the outer sleeve.
19. (New) The plug-in connection of claim 17, wherein a spacing between the inner sleeve and
the outer sleeve is smaller in a region proximate to the at least one opening than in a region away

Applicant: Hartmann, Harald

from the at least one opening, and wherein the inner sleeve and the outer sleeve are connected at least in the region away from the at least one opening by an end wall oriented in the radial direction.

20. (New) The plug-in connection of claim 17, wherein the detent spring is U-shaped having parallel legs which form opposing latching elements, with each latching element protruding through a corresponding one of the at least one opening, said corresponding openings being parallel to one another.

21. (New) The plug-in connection of claim 17, wherein the detent spring includes a detent clip extending through an associated one of the at least one opening and facing an inclined surface of the detent shoulder on the nozzle, said detent clip latching behind the detent shoulder at a third latching location.

22. (New) The plug-in connection of claim 17, wherein the plug further includes a sealing ring with a sealing lip that is angled so as to sealingly contact an inclined surface formed on the detent shoulder.
